Testcases (examples/inletoutlet) included in the full DualSPHysics package v5.4 in http://dual.sphysics.org/index.php/downloads/

01_FlowCylinder • 2-D flow past a circular cylinder in steady (Re=20) and unsteady (Re=200) modes. Video	02_OpenChannel • 2-D open channel flow over a sloped channel (Re=100). Video	03_ReverseFlow • 2-D flow reversion, where the reversion is shown by means of a floating body immersed in the flow. Video	04_Waves2D • 2-D regular waves generated at the inlet using predefined velocities from linear wave theory. Video	
05_ShapesInlet3D • 3-D case with inlet buffers of different shapes (rectangular, cylindrical and diamond shapes). [Video] • 3-D case with inlet buffer of cylindrical shape but with a different angle. [Video]	06_Box4Inlet3D • 3-D case with several inlet buffers in the same simulation. [Video]	7_CurrentHull • 3-D flow of constant velocity past a ship hull in a narrow channel. [Video]	8_ImpingingJet • 3-D vertical jet impinging on a flat bottom. [Video]
